

Would you Like Fries with That?

- 1. Did people order differently? Why do you think that is?**
- 2. Are you surprised by the results?**

1. People did not order differently. I think this because people don't really care about what happens to their health when they eat this food. Also they probably went to McDonald's for a certain food.
2. I am not very surprised by this because in my hypothesis I said that I didn't expect people to change their minds.
